# Nonresponsive based on revised scope

**Update on PFAS contamination, Blades, Delaware** – On November 6, EPA contractors collected the last round of private well water samples. A total of 54 properties were sampled during the removal assessment. The raw water (no treatment) of all locations was sampled twice. A total of 8 properties received carbon filters from the state of DE after the first round of sampling. The filtered water of those 8 properties was sampled twice, after the installation of the filters, to make sure the filters were working. This completes the removal assessment, which began in February 2018. Removal has shared all the validated data with Site Assessment, which just began assessment activities in the town of Blades. (E. Rovira, 4-3436).
